### SCOPE OF WORK – REPLACEMENT OF SABC IT RENTED AND OWNED SAN STORAGE AND SWITCHES FOR A LEASE PERIOD OF 5 YEARS.

#### 1. BACKGROUND

The SABC IT department is in a position where it has a rented storage device that is close to end of life and it is no longer viable to add storage to it as cost exceeds the cost of later technology disk.

Similarly we have 2 owned HUS storage devices shares the same fate and need to be replaced. Support will soon be no longer available and the cost of it can no longer be defended.

Lastly the SABC owns an AMS storage device that is no longer supported and there is no option but to replace all the storage connected to BIT servers in Henley and the BIT K1 Computer room.

To function efficiently, disk technology is required that is highly available, redundant, supported and cost effective and scalable for natural growth of data as well as to take on expected and unexpected applications like the recent Telkom ONE solution that requires video content. The same applies if the SABC wishes to be competitive as quick turnaround on applications is not negotiable and the effect of sudden market changes and management decisions have an impact on infrastructure that must be responded to without lengthy procurement processes to accommodate the increase and decreases of data and hosting platform use.

IT has positioned the SABC to be able to respond quicker to business requirements with quick provisioning of processing power with the use of VMWare servers. The new Mainframe will arrive in the first half of this year and the new disk based backup solution even sooner.

The storage will be scalable to support normal and any additional growth brought by new projects.

The access speeds through switches will enable servers to access data at speeds that will not limit new servers, mainframe, network infrastructure and backup solution and speed of moving information between locations and outside business partners will be improved drastically.

New functionality like data de-duplication will lower amount of storage used and replication will assist with higher availability and failover of systems between buildings. Monitoring, reporting and capacity planning will be simplified and less resource intensive as it will be included in the solution.

Lowering existing processing and backup times will move us closer to a 2 shift scenario instead of 3 and automation will result in stepping closer to a dark computer room where remaining Operators will become Job Schedulers improving our response to security incidents and lowering risk related to events like Covid. It will also free up resources to be able to respond to events logged by the new Enterprise monitoring system.

## 2. REQUIREMENTS AND SCOPE OF SERVICES
